**PRACTICA No. 2**

**Estudiante:**

Caballero Burgoa, Carlos Eduardo.

**Carrera:**

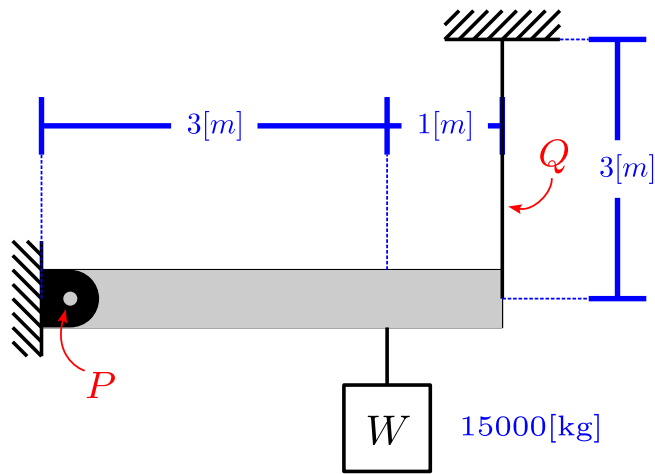

Ingeniería Electromecánica.

**Docente:**

Ing. Guido Gómez Ugarte.

**Fecha de entrega:** 30 de Septiembre del 2022.

**PROBLEMA 1:**

Hallar:

1. Reacciones.
2.  $\varnothing$  del pasador P (SAE1010,  $\sigma_f = 2100[kg/cm^2]$ ,  $n = 2$ ).

3.  $\varnothing$  del cable Q (SAE1040,  $\sigma_f = 4200[kg/cm^2]$ ,  $n = 2$ ).
4.  $\varnothing$  de los pernos de anclaje (SAE1020,  $\sigma_f = 2500[kg/cm^2]$ ,  $n = 2$ ).

**Solución:****Sistema no concurrente:**

Se plantean las ecuaciones de equilibrio:

$$\sum F_x = 0$$

$$\sum F_y = 0$$

Se consideran los siguientes puntos para el calculo de momentos:

$$\sum M_A = 0$$

$$\sum M_B = 0$$

$$\sum M_C = 0$$

**Variables:**  $A_x$ ,  $A_y$ ,  $C_y$ .

$$\sum F_x = 0:$$

$$A_x = 0$$

$$\sum F_y = 0:$$

$$A_y - 15000 + C_y = 0$$

$$A_y + C_y = 15000$$

$$\sum M_A = 0:$$

$$15000(3) - C_y(4) = 0$$

$$4C_y = 45000$$

$$C_y = 11250$$

$$\sum M_B = 0:$$

$$A_y(3) - C_y(1) = 0$$

$$3A_y - C_y = 0$$

$$\sum M_C = 0:$$

$$A_y(4) - 15000(1) = 0$$

$$4A_y = 15000$$

$$A_y = 3750$$

$$\begin{aligned} A_x &= 0[\text{kg}] \\ A_y &= 3750[\text{kg}] \\ C_y &= 11250[\text{kg}] \end{aligned}$$
