PREGUNTA 1.- Hallar el diametro de la sección circular del pasador, para un material SAE 1045 cuya tensión de fluencia es de 4500 Kg/cm2, tomar n=2

PREGUNTA 2.- Hallar las tensiones cortantes y normales en una sección a 30° del eje "y"

$$\sigma_0 = \frac{\sigma X + \sigma Y}{2} = 1000$$

$$R = \sqrt{\left(\frac{\sigma X - \sigma y}{2}\right)^2 + Txy^2} = 4472$$

$$Tg2\alpha = \frac{2\tau xy}{6x - 6y}.....2 \alpha = 26,5^{\circ}$$

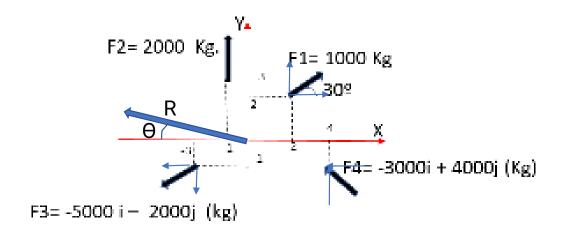

$$2\theta + 2\alpha = 60^{\circ}......2\theta = 33,5^{\circ}$$

$$\sigma_{X'} = \sigma_0 + R \cos 2\theta = 1000 + 4472 \cos 33,5^\circ = 4729 \text{ Kg/cm2}$$

$$\sigma_{y'} = \sigma_0 - R \cos 2\theta = 1000 - 4472 \cos 33,5^\circ = -2729 \text{ Kg/cm}2$$

$$Tx'y' = R sen 2\theta = 4472 sen 33,5 = 2468 Kg/cm2$$

PREGUNTA 3.- Hallar la fuerza y el momento resultante

```
F1 = 1000 cos 30 i +1000 sen 30 j
F1 = 866 i + 500 j
F2 = 0 i + 2000 j
F3 = -5000 i -2000 j
F4 = -3000 i +4000 j
```

R= -7134 i +4500 j R= 8434 Kg
$$\Theta$$
 = 32,24°

M= 866 *2- 500*2 + 2000*1+5000*1-2000*3+3000*1-4000*4= -11268 kg.cm
